

About the Software

How can our software help?

Our powerful Pairs Trading Software acts as a complete end-to-end solution for Pairs Trading from downloading daily stock data, to identifying suitable pairs and viewing specific Pairs in details. Through a simple three stage process, pairs can be identified through user defined, or pre-defined sector, lists. You can download a trial version for free.

How does the product work?

Our product downloads the free stock data, up to 18 symbols at a time, available from the Yahoo data servers. The software includes pre-defined symbol lists for specific sectors where suitable pairs may be identified.

What about monthly charges for the data?

There are no monthly charges for the data as you download it directly from Yahoo.com for free. We do not (re)sell the data, our software is just a kind of a very smart and intelligent Internet browser.
